Prices correct at time of printing 21/05/18 EO&E.

Please call us for an exact price including postage and special offers. Tel: 01756 749444

Sampling Procedure

1. We have sent you a 500ml bottle to take milk samples from 20% of your herd and a self-seal bag for hair samples from these cows or any dry cows.
Please sample from your problem cows, that is high cell count cows, cows with mastitis, ones that have just calved, ones that wont get in calf, healthy cows & a bulk milk sample.
2. Take a sample of fore-milk from the problem cows and a sample from the bulk tank in the 500ml bottle, put the lid on & mix.
3. Cut samples of body hair (often cleaner than tail) roughly the size of a 50p from the cows that you take milk samples from. Place these inside the bag.
4. Fill the labelled glass vial with milk from the 500ml bottle.
5. Make sure the glass vial is labelled & the lid is securely closed.
6. Put the vial in the small re sealable plastic bag, put the vial & hair samples in the padded addressed envelope.
7. Complete the "Herd Health Analysis" form & place in the padded envelope.
8. Post the envelope to us at The Barn, North Street, Gargrave BD23 3RN

Please allow a couple of days for us to go through your test then call us to discuss the results.

Dairy Herd Health

This is a combination bioresonance remedy aimed at the milking herd, to assist with their overall health & help reduce problems they are prone to such as mastitis & high cell counts.

To achieve the best results this remedy is made specific to your farm, as of course every farm has different bacteria & viruses present.

The specific testing is done by taking samples of milk & hair from 20% of the herd, as well as a bulk tank sample. In the sampling include cows with high cell counts, mastitis, poor fertility, new calver, mid lactation, late lactation & dry cows.

The samples are sent back to us for testing on our machine, which runs an energetic test to show up imbalances in the herd. The test runs through 222 categories including bacteria, viruses, parasites, fungi, toxin, respiratory & digestion. A print out & the remedy is then produced.

Administration of the remedy is straight forward. The remedy is added to all water troughs (including dry cows) daily for the first week or until cell counts drop if they have been a problem. The following week it is added every other day, then once a week after that.

We also supply you with a higher potency remedy for use on problem cases as they come through the parlour.

Using the remedy on your herd will aid the immune system & therefore general health & wellbeing of the herd as well as any calves born while the cows are receiving the remedy.
